The global Solid-state Battery Cell Wet-process Mixer market size is predicted to grow from US\$ 113 million in 2025 to US\$ 587 million in 2032; it is expected to grow at a CAGR of 26.6% from 2026 to 2032.

In 2025, global sales of Solid-state Battery Cell Wet-process Mixer reached 136 units, with an average global market price of USD 856,000 per unit. The gross margin of major industry players was approximately 30%-45%. Solid-state Battery Cell Wet-process Mixer is a dedicated front-end process equipment used in the manufacturing of solid-state and semi-solid-state batteries. It is mainly used to mix, knead, disperse and deaerate raw materials such as cathode materials, anode materials, solid electrolytes, conductive agents, binders and solvents, thereby preparing uniform and stable battery slurry. The prepared slurry is subsequently used in coating, casting, lamination, drying and other processes, making the equipment a key factor affecting slurry uniformity, electrode film quality and cell consistency in solid-state battery production. The upstream supply chain mainly includes motors, reducers, mixing blades, twin screws, vacuum systems, metering and feeding systems, seals, sensors, PLC control systems and stainless-steel structural components. Downstream customers are primarily manufacturers of solid-state batteries, semi-solid-state batteries and next-generation lithium batteries, with end-use applications covering new energy vehicles, consumer electronics and aerospace.
