The global Solid-State Battery Composite Aluminum Foil market size is predicted to grow from US\$ 522 million in 2025 to US\$ 3118 million in 2032; it is expected to grow at a CAGR of 29.7% from 2026 to 2032.

In 2024, global Solid-State Battery Composite Aluminum Foil reached approximately 138 million square meters, with an average global market price of around US\$ 3 per square meter.

Solid-state battery composite aluminum foil is a key functional current collector material used in all-solid-state or semi-solid-state lithium batteries. By laminating ceramic coatings, inorganic fillers, polymer binders, interface reinforcement layers, or conductive structural layers onto the surface of the aluminum foil substrate, the stability of the electrodes under high voltage, solid-state interface, and long-cycle conditions is improved. Composite aluminum foil effectively improves the interfacial adhesion, puncture resistance, heat resistance, electrochemical stability, and lithium dendrite suppression ability of solid-state batteries, while reducing internal resistance and improving electrode uniformity. It is one of the important materials for improving the safety, energy density, and cycle life of solid-state batteries. Currently, it is widely used in new systems such as solid-state power batteries, solid-state energy storage batteries, solid-state pouch cells, semi-solid-state cells, and solid-state sodium-ion batteries.

The upstream of solid-state battery composite aluminum foil mainly includes aluminum foil substrates, inorganic ceramic powders (alumina, silicon dioxide, zirconium oxide), conductive carbon materials (carbon nanotubes, graphene), polymer binders, functional coating solutions, and coating equipment. Major suppliers include CATL, Putailai, Xiangfenghua, BTR, and Zhengtuo New Energy. The midstream consists of composite

aluminum foil manufacturers, who form high-performance functional layers through processes such as coating, baking, lamination, surface treatment, and online testing. The downstream includes solid-state battery manufacturers, cell manufacturers, power battery installation plants, and energy storage system companies; typical users include CATL, BYD, and SVOLT.

The annual production capacity of a single-line Solid-State Battery Composite Aluminum Foil is approximately 5 million square meters, with a gross profit margin of approximately 20%-40%.

United States market for Solid-State Battery Composite Aluminum Foil is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for Solid-State Battery Composite Aluminum Foil is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.

Europe market for Solid-State Battery Composite Aluminum Foil is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.

Global key Solid-State Battery Composite Aluminum Foil players cover UACJ Foil, Amcor, Alcan, Toppan, MTI Corporation, etc. In terms of revenue, the global two largest companies occupied for a share nearly % in 2025.
