The global Solid-state Battery Pressure Gauge market size is predicted to grow from US$ 52.98 million in 2025 to US$ 77 million in 2032; it is expected to grow at a CAGR of 5.6% from 2026 to 2032.

A solid-state battery pressure gauge is a precision sensor used to monitor real-time internal pressure changes in solid-state batteries during charge and discharge cycles. It is typically integrated into a battery stack or battery management system (BMS) to detect changes in contact pressure between the electrode and solid-state electrolyte interface. Because solid-state batteries rely on physical contact for ion conduction, appropriate pressure is crucial to maintaining interface stability, reducing impedance, and preventing cracks and dendrite penetration. This pressure gauge features high sensitivity, miniaturization, high-temperature resistance, and long-term stability. It can provide critical data support for safe battery operation, life prediction, and thermal runaway warning, and is an important tool for the research and development and optimization of solid-state battery packaging structures and thermal management strategies.In 2024, the global production of solid-state battery pressure gauges will reach 43,180 units, with an average selling price of US$1,205 per unit.

United States market for Solid-state Battery Pressure Gauge is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
