The global Solid State Isolators market size is predicted to grow from US$ million in 2025 to US$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

A solid-state isolator is an electronic component that uses solid-state technology (such as semiconductor materials) to provide electrical isolation between input and output without the need for physical contact or mechanical parts. This isolation protects the circuit from high voltage spikes and reduces electromagnetic interference. Solid-state isolators are suitable for a variety of applications, including robotics, industrial automation, building automation, power supply, power transmission and distribution, and battery management systems. In summary, a solid-state isolator is a key electronic component that enhances the safety and reliability of a circuit by providing electrical isolation.

United States market for Solid State Isolators is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for Solid State Isolators is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
