The report requires updating with new data and is sent in 48 hours after order is placed.

Solid-State Marine Radar is a marine radar system based on solid-state transmission technology, using semiconductor transmitters (such as gallium nitride GaN or gallium arsenide GaAs) instead of traditional magnetrons. Compared with traditional pulse radar, solid-state radar has higher stability, lower maintenance requirements, higher resolution and faster target update rate. Its core advantages are that it can provide clear images, support multi-band operation and have stronger target recognition capabilities, making it suitable for a variety of marine environments, including bad weather and complex offshore channels.

The global Solid-State Marine Radar market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
