The global Solid-state Silicon Battery market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

A solid-state silicon battery or silicon-anode all-solid-state battery is a type of rechargeable lithium-ion battery consisting of a solid electrolyte, solid cathode, and silicon-based solid anode.[1][2]

In solid-state silicon batteries, lithium ions travel through a solid electrolyte from a positive cathode to a negative silicon anode. While silicon anodes for lithium-ion batteries have been studied, they were largely dismissed as infeasible due to general incompatibility with liquid electrolytes. Developments in 2021 showed that solid-state silicon lithium-ion batteries are possible, and offer many of the hypothesized benefits.[1] Solid electrolytes more easily interface with the anode. These batteries are different from other solid-state batteries due to their use of silicon instead of less energy-dense materials.

United States market for Solid-state Silicon Battery is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for Solid-state Silicon Battery is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
