Welding consumables broadly constitute welding wires, flux, stick electrodes, and filler metals. All these materials undergo melting to join two metals strongly and help protect the molten weld from any form of atmospheric contaminant. Welding wires are primarily used in arc welding and oxy-fuel welding technologies. Solid wires are widely used in metal inert gas welding that needs a shielding gas delivered from pressurized gas bottles. The shielding gas helps in protecting the molten weld pool from all atmospheric contaminants.

The global Solid Wires market size is projected to grow from US\$ million in 2023 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
