Soluble flaxseed fiber is a purified fiber extracted from the flaxseed hull. Although it's part of the flaxseed, it's different from the common flaxseed meal or flaxseed oil we often find. The extraction process removes the fat (oil), protein, and most of the insoluble fiber from the kernel, resulting in a highly purified soluble fiber.The upstream planting and primary processing stages are relatively fragmented, with participants including a wide range of farmers, agricultural cooperatives, and flaxseed primary processing companies. The midstream deep processing stages have high technical barriers and are concentrated in biotech companies or large food ingredient companies with strong technical and R&D capabilities, such as those specializing in the production of flaxseed functional food ingredients. Downstream applications are extensive, with various food manufacturers and health supplement brands using soluble flaxseed fiber as an ingredient.

United States market for Soluble Flaxseed Fiber is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
