The soluble salt pollution meter is an instrument used to detect the concentration of soluble salts (such as chlorides, sulfates, nitrates) on the surface of objects (such as metals, concrete, cultural relics, etc.). The salt content is quantified by conductivity, ion selective electrode or titration to assess the corrosion risk or the protection status of cultural relics. The device is usually portable and suitable for industrial corrosion protection, building restoration, archaeology and other fields. It can quickly screen the degree of salt pollution and guide cleaning or protection decisions.
