Solvent-free Die Bonding Paste is a material used in the semiconductor manufacturing process to securely bond a die to a substrate. This adhesive is characterized by being solvent-free, thus avoiding the environmental problems caused by solvent evaporation and the possible impact of solvent residues on the performance of the chip. Solvent-free Die Bonding Paste is a high-performance, environmentally friendly die bonding material. It consists of polymer resins, curing agents, fillers and other functional additives, and is prepared through specific formulations and processes. This bonding paste has excellent fluidity and wettability at room temperature or under heating conditions, and is able to fully fill the small gaps between the chip and the substrate to form a solid bonding layer.

The global Solvent-free Die Bonding Paste market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
