The global Sonoelastography System market size is predicted to grow from US\$ 928 million in 2025 to US\$ 1492 million in 2032; it is expected to grow at a CAGR of 7.2% from 2026 to 2032.

Ultrasound elastography, also called as sono-elastography, is a modern evolutionary method of sonographic imaging. Techniques include shear wave elastography (also known as transient elastography) and strain elastography (also known as static or compression elastography). These techniques utilize sound waves for assessing the mechanical properties of tissues such as stiffness and elasticity in response to mechanical pressure on tissue. They are used for detecting different pathologies in tissues by using the differences of their aforesaid mechanical properties.

United States market for Sonoelastography System is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for Sonoelastography System is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
