The global Sorbeth market size is predicted to grow from US\$ 49.50 million in 2025 to US\$ 74.86 million in 2032; it is expected to grow at a CAGR of 6.1% from 2026 to 2032.

In 2025, the global sales volume of the Sorbeth Series was approximately 11,000 metric tons. The average ex-works price of mainstream manufacturers was about US\$4.6 per kilogram, while the gross margin of major manufacturers ranged from approximately 25% to 38%.

The Sorbeth Series refers to a class of nonionic polyoxyethylene ethers produced through the addition reaction of sorbitol with ethylene oxide. These products are commonly known as Sorbeth and are generally named according to the average number of moles of ethylene oxide added. Representative products include Sorbeth-20, Sorbeth-30, and Sorbeth-40. As the EO addition level increases, the average molecular weight, hydrophilicity, and water solubility of the product generally increase, while its physical form may gradually change from a viscous liquid to a paste or solid.

The Sorbeth Series offers good water solubility, formulation compatibility, and chemical stability. It can improve the moisturizing, wetting, dispersing, and active-ingredient-solubilizing properties of formulations. Products with different EO addition levels vary in hydroxyl value, viscosity, hydrophilic–lipophilic balance, and functional performance. Industrial-grade or personal-care-grade products can be selected according to specific formulation requirements. Major applications include personal care, pharmaceutical formulations, cleaning agents, textile dyeing and printing, and agrochemical formulations.

United States market for Sorbeth is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for Sorbeth is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
