The purpose of acoustic and shock absorbing adhesive is to reduce the propagation of sound waves through the surface. Its working principle is to form a barrier that absorbs or reflects sound waves, preventing them from passing through the surface. This type of

adhesive is commonly used for walls, floors, and ceilings to reduce noise transmission. On the other hand, soundproofing and damping adhesives are designed to reduce surface vibration. Its working principle is to convert the kinetic energy of vibration into heat, dissipate energy, and reduce the amplitude of vibration. This type of adhesive is commonly used in machinery, equipment, and vehicles to reduce vibration and prevent damage to surrounding components.
