The global Sound Velocity Profiler market size is predicted to grow from US$ million in 2025 to US$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

A sound velocity profiler is an instrument capable of measuring changes in the speed of sound in a fluid. The speed of sound is usually calculated by sending a sound wave signal and measuring its travel time. It can be used in various water bodies such as deep seas, rivers, lakes, etc., and can also be used to measure the speed of sound in the atmosphere.

Sound velocity profilers have broad application prospects in marine research, meteorology, environmental monitoring and other fields. With in-depth research on marine resources and concerns about climate change, the demand for sound velocity profilers continues to increase. At the same time, continuous innovation and improvement of technology will also promote the development of the sound velocity profiler market.
