soundproof chambers designed to keep noise in or out. They can be small and portable or building-sized. Acoustic enclosures are often made out of heavy-duty materials like sheet metal, timber, loaded vinyl, plasterboard or glass.

The use of these materials to encompass the noise source helps to stop noise from radiating out. Acoustic enclosures can be used to isolate and block noise from leaving the area and reaching outside the enclosure, or they can be used to stop outside noise from getting into interior spaces.

Acoustic enclosures may also be used to block or reduce the force of noise that lies at frequencies that could interfere with precise manufacturing processes or

measurements, or certain noise frequencies that hit the most sensitive part of human hearing.
