A Sovereign AI Platform refers to an artificial intelligence infrastructure and software ecosystem developed and operated under the legal, regulatory, and data sovereignty frameworks of a specific country or region. It covers the full stack of computing infrastructure, data storage and governance, foundation model training, inference deployment, and industry application development. Its core characteristics include localized data storage, autonomous model control, regulated computing resources, and compliance with national security requirements, making it widely applicable in governments, defense, finance, healthcare, and critical infrastructure sectors.

The upstream of the Sovereign AI Platform market mainly consists of AI computing infrastructure suppliers (GPUs, AI servers, and data center equipment), cloud infrastructure providers, data security and cybersecurity technology vendors, and foundation model development tool providers. Key components include high-performance chips, storage systems, network interconnects, and localized cloud resources. The midstream consists of sovereign AI platform developers and system integrators that build training, inference, and governance platforms compliant with local regulations. The downstream mainly serves governments, defense and security, financial services, healthcare, energy, and telecommunications for national AI capability building and industrial intelligence transformation.
