The global Soxhlet Extraction Heater market size is predicted to grow from US$ 9366 million in 2025 to US$ 11120 million in 2031; it is expected to grow at a CAGR of 2.9% from 2025 to 2031.

A Soxhlet Extraction Heater is a laboratory heating device designed specifically for performing Soxhlet extractions. A Soxhlet extraction is a widely used technique in chemistry and analytical chemistry to extract a target compound (usually a solid, semi-solid, or non-volatile substance) from a solid sample using a volatile solvent. The process involves continuous extraction and distillation of the solvent to obtain a concentrated extract of the target compound. The Soxhlet extraction heater plays a crucial role in maintaining the required temperature and facilitating the extraction process.

Modern Soxhlet Extraction Heaters are equipped with advanced digital temperature controllers, allowing users to set and maintain precise extraction temperatures. These controllers often include touch-screen interfaces and programmable temperature profiles for customized extraction conditions.
