Soy-based ink is made from soybeans. The oil is refined and then mixed with other environment-friendly compounds such as natural resins and wax. The fine bright colors that can be produced with soy-based inks are a result of the soy oil. It is much clearer and less oily than petroleum-based ink. Soy ink is a frequent choice of newspapers and other mass-produced documents since it can produce bright colors and is substantially more cost-effective than other vegetable-based inks.
