The global Soy Infant Formula market size is predicted to grow from US\$ 287 million in 2025 to US\$ 353 million in 2031; it is expected to grow at a CAGR of 3.5% from 2025 to 2031.

The global soy infant formula market has been witnessing significant growth in recent years. The increasing awareness about the benefits of soy-based products, rising demand for plant-based alternatives, and the growing number of lactose-intolerant infants are some of the key factors driving the market growth. The market for soy infant formula is concentrated in regions such as North America, Europe, and Asia Pacific. North America holds a significant share in the market due to the high prevalence of lactose intolerance and the increasing adoption of plant-based diets. Europe is also a major market for soy infant formula, driven by the growing demand for organic and natural products. The Asia Pacific region is expected to witness substantial growth in the coming years, primarily due to the rising population and increasing disposable income in countries like China and India. The soy infant formula market is highly concentrated, with a few key players dominating the industry. There are several opportunities for growth in the soy infant formula market. The increasing demand for organic and natural products presents a significant opportunity for manufacturers to develop and market organic soy infant formula. Additionally, the rising awareness about the benefits of soy-based products among consumers in emerging economies provides an opportunity for market expansion. Despite the growth prospects, the soy infant formula market also faces certain challenges. One of the major challenges is the availability of alternative plant-based options such as almond and rice milk, which may hinder the growth of soy infant formula. Moreover, the high cost of soy infant formula compared to conventional dairy-based formula is another challenge that manufacturers need to address.
