Soy candles are candles made from soy wax, which is a processed form of soybean oil. They are usually container candles, because soy wax typically has a lower melting point than traditional waxes, but can also be made into pillar candles if certain additives are mixed into the soy wax.

Consumers have become more conscious of the environmental impact of their purchasing decisions. Soy wax is considered a sustainable option because it is made from soybeans, a renewable resource, and it produces fewer emissions compared to paraffin wax.

Soy wax is preferred by many consumers because it is free from harmful chemicals and toxins commonly found in paraffin candles. This makes soy candles a healthier choice for indoor air quality.
