Soybean protein fiber yarn is a type of yarn made from the protein extracted from soybeans. It's considered a sustainable and eco-friendly alternative to traditional yarns because it's derived from a renewable resource—soybeans. The process involves breaking down the soybean protein into a liquid form, which is then extruded into fibers that can be spun into yarn. Soybean protein fiber yarn is known for its softness, smoothness, and silk-like texture. It's also lightweight, breathable, and has moisture-wicking properties, making it suitable for various textile applications such as clothing, accessories, and home furnishings. Additionally, soybean protein fiber yarn is often blended with other fibers like cotton, wool, or bamboo to enhance its properties and create yarns with specific characteristics. Overall, it's valued for its sustainability, comfort, and versatility.

The global Soybean Protein Fiber Yarn market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
