The global Space Debris Recycling Equipment market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Space Debris Recycle Equipment (SDRE) is a device used for space debris recycling. It was developed by the China Academy of Space Technology (CAST) to address the threat of space debris to space exploration and satellite operations.

The main function of SDRE is to capture, recover and process space debris. It consists of a mechanical arm and a debris recovery module that can operate autonomously in space. The mechanical arm can grab the space debris and put it into the debris recovery module for processing and classification. SDRE is also equipped with sensors and monitoring devices that can monitor and control the space debris and the surrounding environment.

The development of SDRE aims to reduce the impact of space debris on space exploration and satellite operations and protect the sustainability of the space environment. It also provides a feasible solution for future space exploration and utilization.

United States market for Space Debris Recycling Equipment is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
