The global Space Debris Removal Services market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Space debris removal services refer to efforts and technologies aimed at mitigating the growing problem of space debris or space junk in Earth's orbit. Space debris consists of defunct satellites, spent rocket stages, fragments from disintegration, and other non-functional, human-made objects in space. As the number of satellites and space activities increases, so does the risk of collisions and the creation of more debris.

Space debris removal services involve various strategies and technologies designed to actively remove or passively mitigate the presence of space debris in Earth's orbit. Active debris removal involves the use of spacecraft equipped with robotic arms, nets, harpoons, or other capture mechanisms to physically capture and remove debris from orbit. Once captured, the debris may be deorbited to burn up in the Earth's atmosphere.

Efforts for space debris removal often involve collaboration between space agencies, private companies, and international organizations to establish guidelines, standards, and norms for responsible space activities. Implementing effective space traffic management practices helps prevent new debris generation and minimizes the risk of collisions.
