Space Domain Awareness (SDA) services constitute a comprehensive set of capabilities and technologies essential for understanding and managing activities in Earth's orbit. These services involve the continuous monitoring and tracking of satellites, space debris, and other objects using ground-based and space-based sensors, including radar and telescopes. SDA supports collision avoidance by providing real-time trajectory information, enabling satellite operators to execute maneuvers when necessary. It encompasses space traffic management, coordinating the movements of space objects to mitigate collision risks and ensure responsible orbital use. Anomaly detection and space event monitoring are crucial aspects, allowing for the timely identification and response to unexpected occurrences. Space Situational Awareness (SSA) contributes to a holistic understanding of the space environment, while international collaboration fosters data sharing and coordination on a global scale. SDA also involves data fusion and analysis from various sources to create a detailed picture of the space domain. Addressing cybersecurity for space systems is integral, ensuring the protection of space assets from cyber threats. Moreover, SDA services support policy and regulatory efforts, contributing to responsible and sustainable space activities. Overall, these services play a pivotal role in enhancing the safety, security, and sustainability of endeavors in Earth's orbit.
