The global Space Qualified Optocouplers market size is predicted to grow from US$ 53.2 million in 2025 to US$ 98 million in 2031; it is expected to grow at a CAGR of 10.7% from 2025 to 2031.

Space qualified optocouplers are devices that electrically isolate the input and output ends through optical isolation. They basically act as an interface between two independent circuits with different voltage levels. This type of isolation device usually consists of a light-emitting diode (LED) and a photoresistor (such as a photodiode). The light signal emitted by the LED controls the resistance value of the photoresistor, thereby achieving isolation and signal transmission between the input and output ends.
