The global Spacecraft Attitude Sensor market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

The attitude sensor is one of the core components of the spacecraft attitude control system. Its function is to process the signal of the satellite attitude angle change value sent by the attitude sensor, through a series of comparisons and processes, to generate a control signal and send it to the attitude actuator. According to the control signal sent by the attitude controller, a torque is generated to make the satellite attitude Restore to correct position. According to the method of obtaining attitude information, attitude sensors are divided into optical sensors, inertial sensors, radio frequency sensors and magnetic sensors.
