SPAD dToF (Single-Photon Avalanche Diode Direct Time-of-Flight) Sensors are high-precision optical sensors that measure the distance to an object by detecting the time it takes for a single photon of light to travel to the object and return. These sensors utilize SPAD arrays, which are ultra-sensitive photodetectors capable of detecting individual photons with picosecond-level timing resolution.

The upstream raw materials for SPAD dToF chips primarily include wafers, photoresists, electronic chemicals, sputtering targets, and packaging materials. Typical suppliers include Shin-Etsu Chemical, SUMCO, JSR, and Tokyo Ohka TOK.

The single-line production capacity of SPAD dToF chips is typically related to the chip manufacturing process and production line scale, and specific figures may vary by manufacturer. The gross profit margin of SPAD dToF chips is affected by manufacturing costs, market demand and competitive landscape. The industry's average gross profit margin is usually between 40% and 60%. With the increase in market demand, the product gross profit margin is expected to increase further.
