Automotive brake callipers are a type of braking mechanism used in automobiles to increase vehicle safety. They are high-pressure braking systems that are becoming increasingly used in disc brakes. Braking callipers are often composed of stainless steel, aluminum, or cast iron, which are all available on the market at reasonable costs, making them a cost-effective option for brake system makers. The main benefit of this device is that it may be designed to provide adequate fail-safe capacity to de-accelerate the car's wheels by producing friction with the rotors.
