The global SPDT Time Delay Relay market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

SPDT time-delay relay is an electrical control device, usually used to control the switch of electrical equipment in a circuit, and has a time-delay function. It has two output channels, and each channel contains a switch that can control two different circuits. The main feature of the SPDT time-delay relay is that it has a single-pole double-throw (DPDT) switching function in the circuit, that is, it can switch two different circuits, each circuit has a normally open and a normally closed contact. It also has a delay function, which can delay the switch operation for a period of time after triggering. SPDT time-delay relays usually consist of a control unit and one or more relay outputs. The control unit contains a timer and a trigger, and the delay time and trigger conditions can be set according to the user's needs. When the trigger condition is met, the control unit sends a signal to the relay output, and the relay output switches the state of the switching circuit. SPDT time-delay relays are widely used in various fields, such as: industrial automation, building automation, lighting control, electric curtains, etc. It has the characteristics of high reliability, convenient installation and simple use.

United States market for SPDT Time Delay Relay is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
