Special bar quality (SBQ) steels can be defined as those, which are developed for challenging and high stress applications. Thus, these steels stand out different & tall among a diversity of grades that are in use in the enterprising processes. The SBQ steels have thus emerged as the mandatory requirements in various applications like those defined by high speed machining, high stress and high tensile strength among other finer attributes of engineering and metallurgy. The SBQ steels are today offered by manufacturers in the form of stainless steel bar, steel Hexagons, flats, tubes and other products of demand and relevance in manufacturing economy. These are mostly used in the development of bearings, high speed shafts, gears and other vital products that have to be resistant to the metal fatigue through prolonged and continuous use as moving parts in machineries/automobiles.
