Special bearings for shock absorbers are precision components designed to manage the rotational and axial loads within automotive suspension systems—particularly in MacPherson strut assemblies. These bearings, often referred to as strut mount bearings or suspension top mount bearings, allow smooth steering movement while absorbing road shocks and vibrations. They ensure proper alignment between the shock absorber and the vehicle body, improving ride comfort, steering response, and component longevity.

These bearings are typically made with durable steel or engineered plastic raceways and are often combined with rubber bushings or mounts to isolate vibration. They must withstand harsh conditions such as dirt, moisture, and temperature fluctuations while maintaining low friction and high load capacity. Precision sealing, grease retention, and corrosion resistance are critical for their long-term reliability.

United States market for Special Bearings for Shock Absorbers is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.
