Abstracts

The global Special Cotton Linter Pulp market size is predicted to grow from US$ 391 million in 2025 to US$ 776 million in 2032; it is expected to grow at a CAGR of 10.2% from 2026 to 2032.

In 2025, the global production volume of Special Cotton Linter Pulp reached 320 thousand tons, with an average selling price of USD 1,250 per ton, production capacity of 400 thousand tons, and a gross profit margin of 25%.

Special cotton linter pulp is a high?purity cellulose pulp obtained by removing the residual short cotton fibres (linters) from cottonseed after ginning, and then processing them chemically or mechanically, used for producing high?performance specialty papers, textile fibres, pharmaceutical/medical materials and other niche applications.

In the upstream, this product uses cotton linters – short fibres remaining on cottonseed after ginning – as raw material; supply depends on cotton cultivation and seed?processing industry. Downstream applications include specialty paper, textile fibres, pharmaceutical and cosmetic high?purity cellulose derivatives. Upstream supply is influenced by cotton planting and linters recovery, while downstream demand is driven by packaging, textile lightweighting, biodegradable materials and pharmaceutical/medical material trends.

The global Special Cotton Linter Pulp market is relatively concentrated and primarily driven by demand from downstream industries such as cellulose acetate, pharmaceutical excipients, and specialty chemical materials. Due to limited cotton linter resources and the requirement for advanced processing technologies and equipment, the industry has relatively high entry barriers. The United States, China, Uzbekistan,

and India are among the major production regions, with representative companies including Georgia-Pacific, Hubei Jinhanjiang Refined Cotton, and Fargona Kimyo Zavodi. With increasing demand for bio-based materials, sustainable cellulose products, and high-performance chemical materials, Special Cotton Linter Pulp is expected to maintain growth potential in high-value cellulose applications.
