Comparing with spherical zinc powder, flake zinc powder has stronger covering power, floatability, shielding ability and metallic luster, so that in the anticorrosive paint prepared with flake zinc powder, the zinc powder is arranged in a sheet shape, and the parallel connection among the sheet is achieved, the contact pattern is surface contact, resulting in a dense coating and a long corrosion route, which not only greatly reduces the zinc consumption and coating thickness per unit area, but also greatly improves the shielding performance and corrosion resistance of the coating. For example, when zinc-rich primer is prepared with flake zinc powder, the amount of zinc powder is only one third of that of ordinary zinc-rich primer, and the corrosion resistance is comparable or better than that of spherical zinc powder rich zinc coating and resulting a sharp reduction in cost of zinc-rich coatings.

The global Special Flake Zinc Powder for Zinc-Rich Coatings market size is projected to grow from US\$ 200 million in 2024 to US\$ 295 million in 2030; it is expected to grow at a CAGR of 6.7% from 2024 to 2030.
