Specialized Inspection Robot refers to purpose-built mobile robotic systems designed to perform inspection, monitoring, mapping, condition assessment, and limited maintenance support in hazardous, inaccessible, confined, submerged, or operationally complex environments. The research scope covers land-based wheeled, tracked, crawler, and legged robots; collision-tolerant or specialized aerial inspection robots; and underwater remotely operated or autonomous robotic platforms. These systems combine a mobility platform with visual cameras, thermal imaging, acoustic sensors, gas detectors, LiDAR, sonar, ultrasonic thickness measurement, other nondestructive testing payloads, communication equipment, navigation modules, and mission-control software. Depending on the application, Specialized Inspection Robot may operate by remote control, supervised autonomy, or fully autonomous route execution, with capabilities such as obstacle avoidance, three-dimensional mapping, automatic docking, repeatable data acquisition, defect identification, and integration with asset-management systems. The principal applications include electric power facilities, oil and gas installations, petrochemical plants, mines and metal-processing sites, tunnels and transportation infrastructure, municipal pipelines, storage tanks, offshore structures, ship hulls, underwater infrastructure, emergency response, and security inspection.
