According to our LPI (LP Information) latest study, the global SPECT and SPECT-CT market size was valued at US\$ 1591.2 million in 2023. With growing demand in downstream market, the SPECT and SPECT-CT is forecast to a readjusted size of US\$ 2205.2 million by 2030 with a CAGR of 4.8% during review period.

The research report highlights the growth potential of the global SPECT and SPECT-CT market. SPECT and SPECT-CT are expected to show stable growth in the future market. However, product differentiation, reducing costs, and supply chain optimization remain crucial for the widespread adoption of SPECT and SPECT-CT. Market players need to invest in research and development, forge strategic partnerships, and align their offerings with evolving consumer preferences to capitalize on the immense opportunities presented by the SPECT and SPECT-CT market.

Using specialized detector crystals that emit light when hit by photons (radiation emanating from the body) we are able to plot their origin on a grid or matrix using intricate x- y- coordinate circuitry that ultimately allows us to reconstruct the physiological and pathological processes taking place in the body pictographically by coupling radioactive isotopes to specific drugs, chemicals and molecules and administering them.

GE healthcare is estimated to have a major share in the global market with 38%.
