A Spectral Transmittance Instrument is a precision device used to measure the transmittance of light across specific wavelengths or a range of the electromagnetic spectrum. By analyzing how much light passes through a material at each wavelength, it provides detailed insights into the material's optical properties, such as transparency, absorption, and spectral uniformity. This instrument is widely used in industries like optics, coatings, and display manufacturing, as well as in research fields for evaluating materials like glass, films, and polymers. Its high accuracy and ability to analyze spectral characteristics make it essential for quality control and material development.
