The global Spectroscopic Prism Camera market size is predicted to grow from US\$ 15.69 million in 2025 to US\$ 28.65 million in 2032; it is expected to grow at a CAGR of 9.0% from 2026 to 2032.

A spectroscopic prism camera is a multi-channel imaging device that uses a beam splitter to separate incident light by wavelength or polarization state, and simultaneously projects it onto multiple image sensors. Its core structure is usually composed of dichroic or multi-color prism components, which can decompose light into RGB or multispectral signals and achieve synchronous acquisition. In 2025, global Spectroscopic Prism Camera production reached approximately 867 Units, with an average global market price of around US\$ 18,500 per unit.

Spectroscopic Prism Camera is a high-end imaging device with multi-channel optical splitting as its core. It has maintained growth in the short term driven by industrial detection and multispectral demand, but its mid to low end applications are gradually being replaced by single sensors and algorithm solutions. The industry presents a pattern of coexistence of high-end stability and mid-range differentiation.
