The global Spesolimab market size is predicted to grow from US\$ 176 million in 2025 to US\$ 324 million in 2032; it is expected to grow at a CAGR of 7.9% from 2026 to 2032.

Spesolimab is a humanized monoclonal antibody that targets the interleukin-36 receptor (IL-36R). It is primarily used for the treatment of moderate to severe inflammatory skin diseases, including generalized pustular psoriasis (GPP). The drug works by blocking the IL-36 signaling pathway, thereby inhibiting the inflammatory cascade, rapidly controlling acute skin inflammation, and improving clinical symptoms. As one of the first biologic agents targeting the IL-36 pathway, spesolimab represents a significant breakthrough in the treatment of rare dermatological diseases and provides a novel targeted therapeutic option for related inflammatory conditions. In 2025, global Stapokibart production reached approximately 85,000 units.

Spesolimab, as the first biologic targeting the interleukin-36 receptor (IL-36R), holds a first-mover advantage in the market for generalized pustular psoriasis (GPP), a rare inflammatory skin disease with high unmet medical needs. As GPP is increasingly recognized as a distinct disease entity and the key role of the IL-36 pathway in inflammatory pathogenesis continues to be validated, the clinical value of this therapy has been further enhanced. Although the global GPP patient population is relatively small, the disease is characterized by severe acute flares and urgent treatment needs, giving Spesolimab a market profile of high unit price and strong clinical necessity. From a competitive landscape perspective, this field is still at an early stage of development. Apart from Spesolimab, only a limited number of IL-36-targeted therapies are in clinical or early development stages, resulting in relatively low competition and a temporary monopolistic advantage in the short term. However, in the long run, expanding applications of mainstream psoriasis targets such as IL-23 and IL-17 therapies, as well as the emergence of new inflammatory pathway drugs, may gradually intensify competitive pressure. Looking ahead, with expanded indications (such as other

IL-36-mediated inflammatory diseases), improved diagnosis rates, and increased global market penetration, the market size of Spesolimab is expected to grow rapidly, further strengthening its influence in the rare dermatology biologics market.
