The global Sphere Turning Lathe market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

A sphere turning lathe is a specialized type of lathe designed to create spherical shapes on a workpiece. Unlike conventional lathes that are primarily used for turning cylindrical parts, a sphere turning lathe is equipped with a unique mechanism that allows it to shape a workpiece into a sphere or a partially spherical form. The machine typically consists of a lathe bed, headstock, tailstock, and a cutting tool, but it also includes a special carriage or headstock arrangement that enables the cutting tool to move in a pattern that results in a spherical shape. This is often achieved with the use of a swiveling headstock or a carriage that can pivot or rotate around multiple axes. Sphere turning lathes are essential in industries requiring precise spherical components, and they significantly enhance the efficiency and accuracy of producing such shapes compared to manual methods.

United States market for Sphere Turning Lathe is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
