Thermal interface material is a general term for the materials used for coating between the heat sink and the heating device to reduce the contact thermal resistance between them. Any surface will have roughness, so when two surfaces are in contact with each other, it is impossible to completely touch each other, there will always be some air gaps in it, and the thermal conductivity of air is very small, so it is relatively large. The contact thermal resistance. The use of thermal interface materials can fill this air gap, which can reduce contact thermal resistance and improve heat dissipation performance. Spherical alumina can be used as heat sink filler, heat sink (MC board) filler, heat dissipation grease, phase change sheet, semiconductor sealing resin, silicon-based

heat dissipation glue and other compounds when used in thermal interface materials.

The main suppliers of Thermal Interface Materials include Dow, Panasonic, Parker Hannifin, Shin-Etsu Chemical, Henkel, Fujipoly, DuPont, etc.
