The global Spherical Aluminum Nitride (AlN) market size is predicted to grow from US\$ 68 million in 2025 to US\$ 147 million in 2032; it is expected to grow at a CAGR of 11.9% from 2026 to 2032.

The upstream material of spherical aluminum nitride is mainly high-temperature alumina. The downstream material is mainly used in thermal pads, thermal gels, etc. The terminals are mainly high-end network communications and consumer electronics.

In terms of price, it is higher than spherical alumina, about 144 usd/kg. Its advantage is excellent thermal conductivity and excellent thermal conductivity. When used in conjunction with spherical alumina, it can greatly improve the thermal conductivity of polymer composite materials.

At present, the main methods for preparing spherical aluminum nitride powder are carbothermal reduction method, direct nitridation method, in-situ nitridation method, self-propagating high-temperature synthesis method, etc. However, there are high technical thresholds for achieving mass production and high output rates, so its processing costs are high and expensive, which also indirectly hinders its widespread application in thermal conductive materials.
