Spherical bridge bearing, also called spherical bearing, spherical bearing pad, is designed to ensure vertical and horizontal forces transferring under control which is a connection devices between superstructures and substructures. Spherical bearings are used to accommodate large rotations by the use of a lower spherical surface. This is normally lined with dimpled PTFE and matched to an upper stainless steel surface. These types of bearings are more expensive than pot bearings due to the increased machining and would only be used on major structures, to accommodate increased deck rotations. Generally, these bearings require a minimum co-existent vertical load to prevent instability.
