Spherical screens, especially LED spherical screens, are specially designed display screens that have a complete spherical appearance. This type of screen is usually composed of multiple LED modules or modules that are mounted on a spherical bracket to cover the entire surface of the sphere. Due to this design, the spherical screen can display images and video content within a 360-degree range, providing viewers with a full range of visual experience. It has exquisite picture quality, a strong three-dimensional sense of the picture, and its diameter can be customized according to customer needs. It is widely used in commercial display occasions and industry design.

Hemispherical screens, also known as ball screens or dome screens, have a screen part that is a full hemisphere or less than 1/2 spherical section. This screen uses a hyperbolic display screen shape to surround the viewing point, and the displayed image content can create a spatial perspective effect close to the real environment, bringing an immersive experience to the audience.

United States market for Spherical and Hemispherical Screens is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.
