A spin etcher is a precision processing equipment characterized by the presence of one or more rotating workstations designed to hold the material to be etched. During operation, etching solution is evenly sprayed onto the rotating material's surface through a controlled pump, relying on centrifugal force to ensure the uniform distribution and rapid flow of the etching solution, thus accelerating the etching rate and enhancing processing efficiency. The equipment typically features a precise speed control system that can adjust the rotation speed according to etching requirements, ensuring the uniformity and accuracy of the etching process. The design of the spin etcher emphasizes the improvement of etching solution utilization, reducing waste, and employs sealing and exhaust systems to protect the environment and the operator's safety. Furthermore, its compact design and automated operation process make the spin etcher easy to maintain and simple to operate, significantly reducing the cost and difficulty of manual operation.
