A Spinal Hyperextension Orthosis is a medical device used to treat conditions such as spinal hyperextension deformity or spina bifida with hyperextension deformity. Spinal hyperextension is excessive curvature of the spine backwards, which can cause discomfort and pain in the lumbar, thoracic, and cervical spine, among other areas. Spinal hyperextension orthotics are usually made of metal or plastic material and wrap around the back to provide support and limit the curvature of the hyperextended spine.

It can be adjusted according to the needs of the patient to accommodate different degrees of correction and stages of treatment. Spinal hyperextension correctors usually need to be used under the guidance of a doctor, and at the same time cooperate with comprehensive treatment methods such as physical therapy. The advantage of a hyperextension orthosis is that it can reduce the pain and discomfort caused by the hyperextension of the spine and prevent further spinal deformity and injury. At the same time, it can help patients maintain normal posture and movement, promote rehabilitation and restore function.
