The global Spinal Surgical Robots market size is predicted to grow from US\$ 240 million in 2025 to US\$ 618 million in 2031; it is expected to grow at a CAGR of 17.1% from 2025 to 2031.

Spinal surgery has evolved dramatically over the years as advances in technology have made it possible to improve surgical techniques. Spinal surgery involves the modification of the affected area of the back bones and nerves. The implantation of one or more screws or components is a very delicate surgery. The robot can achieve better precision than can a skilled surgeon. Robotic procedures offer significant cost savings in terms of pre- and post-operation care costs and length of stay at hospitals. Technological advances and breakthroughs leverage new materials and new sensor configurations. Sophisticated software is further evolving product implementation: Clinically efficient solutions, Clinically less complex surgery, Shorter length of stay, Minimally invasive surgery, Financially lower cost and Operationally more simple.

In the Chinese market, the core manufacturers of spinal surgical robots (Spinal Surgical Robots) include TINA VI Medical Technologies, Zimmer Biomet, Medtronic and Shenzhen Futurtec Medical, etc. The top three manufacturers account for approximately 86% of the Chinese market.

In terms of product type, guided surgical robots occupy a dominant position, accounting for 93% of the market share. At the same time, in terms of applications, minimally invasive surgery is the largest application field, accounting for 80%.
