The global Spiral Wound Membranes market size is predicted to grow from US\$ 351 million in 2025 to US\$ 429 million in 2031; it is expected to grow at a CAGR of 3.4% from 2025 to 2031.

The impact of the latest U.S. tariff measures and the corresponding policy responses from countries worldwide on market competitiveness, regional economic performance, and supply chain configurations will be comprehensively evaluated in this report.

Nanofiltration membrane interception molecular weight between reverse osmosis membrane and ultrafiltration membrane, about 200-800 Dalton. Rejection characteristics: bivalent and polyvalent anions are preferentially blocked, and the rejection rate of monovalent ions is related to the concentration and composition of the feed liquid. Nanofiltration is generally used to remove organic matter and pigment in surface water, hardness in groundwater and partially remove dissolved salt, and is used for material extraction and concentration in food and biomedical production. The operating pressure of nanofiltration membrane is generally 3.5-30bar.

The main consumer countries of roll nanofiltration membrane are the United States, Japan, China, Europe and other countries and regions. Among them, China is the world's largest consumer market, accounting for more than 35% of global sales market.

China's nanofiltration membrane market is mainly occupied by foreign enterprises, the main suppliers include DuPont, Japan's Toray, Nitto Denko, Suez and other enterprises.

Global core spiral wound nanofiltration membrane manufacturers include Dupont, Nitto etc. The top 2 companies hold a share about 60%. In terms of product, 8 inches is the

largest segment, with a share over 60%. And in terms of application, the largest application is drinking water and wastewater treatment, followed by food and beverages.
