The global Split Stabilizer Bars market size is predicted to grow from US\$ 276 million in 2025 to US\$ 510 million in 2032; it is expected to grow at a CAGR of 9.2% from 2026 to 2032.

In 2025, global Split Stabilizer Bars production reached approximately 800k units , with an average global market price of around US\$350 per unit.

Split stabilizer bars are suspension stabilization components designed with a split or modular structure, dividing traditional one-piece anti-roll bars into independently connected left and right sections for more flexible roll control and suspension dynamics adjustment. These systems are commonly integrated with links, bushings, hydraulic actuators, or electronic control modules to regulate torque transfer and anti-roll performance under different driving conditions, thereby balancing vehicle handling stability and ride comfort. Compared with conventional one-piece stabilizer bars, split stabilizer bars offer advantages in lightweight design, modularization, active control, and compatibility with advanced chassis architectures. They are widely used in premium passenger vehicles, SUVs, new energy vehicles, off-road vehicles, and intelligent chassis platforms.

The upstream of the split stabilizer bar industry mainly includes suppliers of spring steel, high-strength alloy steel, aluminum alloys, rubber bushings, hydraulic actuators, electronic control units, sensors, and connecting components. Representative companies include ArcelorMittal, POSCO, Novelis, Continental, Bosch, ZF, and Schaeffler. The midstream consists of stabilizer bar and chassis system manufacturers such as ZF, Mubea, Tenneco, Sogefi, Benteler, Tuopu Group, which are responsible for forging, heat treatment, welding, modular integration, and active control system development. The downstream mainly covers automotive OEMs including BMW, Mercedes-Benz, Audi, Porsche, Tesla, BYD, NIO, Toyota, and Ford, with broad

applications in high-performance vehicles, luxury SUVs, and intelligent chassis systems for new energy vehicles.

The split stabilizer bar market continues to grow driven by increasing demand from new energy vehicles, high-performance SUVs, and intelligent chassis systems. Products are evolving toward active control, lightweight structures, and electronic integration. The development of steer-by-wire chassis, air suspension, and active suspension technologies is further increasing the penetration of split stabilizer bars in premium vehicles. Meanwhile, automotive OEMs are placing greater emphasis on balancing handling stability and ride comfort, which is boosting demand for modular stabilizer systems. However, the industry still faces challenges such as high manufacturing costs, complex control systems, and advanced technical barriers. Overall, the split stabilizer bar market is moving toward high performance, intelligence, and lightweight development.
