The global Spo2 Module market size is predicted to grow from US$ million in 2025 to US$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

The SpO2 Module is a biometric device that measures the oxygen saturation level in a person"s blood, usually through a fingertip sensor. It is a vital sign monitoring tool commonly used in healthcare, sports, and fitness industries. The module consists of a sensor, a microprocessor, and an interface to display the oxygen saturation percentage. It works by detecting the absorption of infrared light in the blood, with higher saturation levels corresponding to more oxygen in the blood.

The industry trend for SpO2 Modules is towards miniaturization, wireless connectivity, and integration with other health monitoring devices. As technology advances, SpO2 modules are becoming more accurate, reliable, and user-friendly. The demand for remote patient monitoring and telemedicine services has also increased the demand for SpO2 modules, as they enable continuous health data collection and remote diagnosis.
