Abstracts

The global Sponge Resilience Tester market size is predicted to grow from US\$ 105 million in 2025 to US\$ 150 million in 2032; it is expected to grow at a CAGR of 5.3% from 2026 to 2032.

The sponge foam rebound tester allows a steel ball of specified diameter and mass to fall freely onto a sponge foam plastic sample from a specified height, and automatically calculates the percentage of the maximum height of the steel ball rebounding to the height of the steel ball falling (i.e. the rebound rate), and uses the rebound rate to express the rebound performance of the foam plastic.

The sponge rebound tester plays an important role in the quality control, performance evaluation and R&D support of sponge products. Although there are certain limitations, by choosing the right tester, professional training and regular maintenance, its advantages can be fully utilized and the testing needs can be met.
